**WHAT IS CLAIMED AS NOVEL AND UNOBVIOUS  
IN UNITED STATES LETTERS PATENT IS:**

1. A pharmaceutical composition, comprising a nucleic acid which comprises an oligonucleotide (oligo) consisting of up to about 15% adenosine (A), and which is effective for alleviating or inhibiting bronchoconstriction, allergy(ies) and/or inflammation, the oligo being anti-sense to a target selected from the group consisting of

target genes and their corresponding mRNAs;  
genomic and mRNA flanking regions selected from the group consisting of 3' and 5' intron-exon borders and the juxta-section between coding and non-coding regions; and  
all mRNA segments encoding polypeptides associated with a disease(s) or condition(s) afflicting lung airways;

combinations thereof;  
pharmaceutically acceptable salts thereof; and  
mixtures thereof.

2. The composition of claim 1, wherein the oligo consists of up to about 10% A.

3. The composition of claim 2, wherein the oligo consists of up to about 5% A.

4. The composition of claim 3, wherein the oligo consists of up to about 3% A.

5. The composition of claim 4, wherein the oligo is A-free.

6. The composition of claim 1, wherein the target gene is selected from the group consisting of target genes and mRNAs encoding polypeptides selected from the group consisting of transcription factors, stimulating and activating factors, interleukins, interleukin receptors, chemokines, chemokine receptors, endogenously produced specific and non-specific enzymes, immunoglobulins, antibody receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide transmitters, adhesion molecules, defensins, growth factors, vasoactive peptides and receptors, and binding proteins; and target genes and mRNAs corresponding to oncogenes, and flanking regions and intron and exon borders.

7. The agent of claim 6, wherein the encoded polypeptides are selected from the group consisting of NfκB Transcription Factor, Interleukin-8 Receptor (IL-8 R), Interleukin 5 Receptor (IL-5 R), Interleukin 4 Receptor (IL-4 R), Interleukin 3 Receptor (IL-3 R), Interleukin-1β (IL-1β), Interleukin 1β Receptor (IL-1β R), Eotaxin, Tryptase, Major Basic Protein, β2-adrenergic Receptor Kinase, Endothelin Receptor A, Endothelin Receptor B, Preproendothelin, Bradykinin B2 Receptor, IgE High Affinity Receptor, Interleukin 1 (IL-1), Interleukin 1 Receptor (IL-1 R), Interleukin 9 (IL-9), Interleukin-9 Receptor (IL-9 R), Interleukin 11 (IL-11), Interleukin-11 Receptor (IL-11 R), Inducible Nitric Oxide Synthase, Cyclooxygenase (COX), Intracellular Adhesion Molecule 1 (ICAM-1) Vascular Cellular Adhesion Molecule (VCAM), Rantes, Endothelial Leukocyte Adhesion Molecule (ELAM-1), Monocyte Activating Factor, Neutrophil Chemotactic Factor, Neutrophil Elastase, Defensin 1, 2 and 3, Muscarinic Acetylcholine Receptors, Platelet Activating Factor, Tumor Necrosis Factor α, 5-lipoxygenase, Phosphodiesterase IV, Substance P, Substance P Receptor, Histamine Receptor, Chymase, CCR-1 CC Chemokine Receptor, CCR-2 CC Chemokine Receptor, CCR-3 CC Chemokine Receptor, CCR-4 CC Chemokine Receptor, CCR-5 CC Chemokine Receptor, Prostanoid Receptors, GATA-3 Transcription Factor, Neutrophil Adherence Receptor, MAP Kinase, Interleukin-9 (IL-9), NFAT Transcription Factors, STAT 4, MIP-1α, MCP-2, MCP-3, MCP-4, Cyclophilins, Phospholipase A2, Basic Fibroblast Growth Factor, Metalloproteinase, CSBP/p38 MAP Kinase, Tryptose Receptor, PDG2, Interleukin-3 (IL-3), Interleukin-1β (IL-1β), Cyclosporin A-Binding Protein, FK5-Binding Protein, α4β1 Selectin, Fibronectin, α4β7 Selectin, Mad CAM-1, LFA-1 (CD11a/CD18), PECAM-1, LFA-1 Selectin, C3bi, PSGL-1, E-Selectin, P-Selectin, CD-34, L-Selectin, p150,95, Mac-1 (CD11b/CD18), Fucosyl transferase, VLA-4, CD-18/CD11a, CD11b/CD18, ICAM2 and ICAM3, C5a, CCR3 (Eotaxin Receptor), CCR1, CCR2, CCR4, CCR5, LTB-4, AP-1 Transcription Factor, Protein kinase C, Cysteinyl Leukotriene Receptor, Tachychinins Receptors (tach R), IκB Kinase 1 & 2, STAT 6, c-mas and NF-Interleukin-6 (NF-IL-6).

8. The composition of claim 1, wherein at least one A is substituted by a universal base selected from the group consisting of heteroaromatic bases which bind to a thymidine base but have antagonist activity and less than about 0.3 of the adenosine base agonist activity at the adenosine A<sub>1</sub>, A<sub>2b</sub> and A<sub>3</sub> receptors, and heteroaromatic bases which have no activity or have an agonist activity at the adenosine A<sub>2a</sub> receptor.

9. The composition of claim 8, wherein all As are substituted by universal bases selected from the group consisting of heteroaromatic bases which bind to a thymidine base but have antagonist activity and less than about 0.3 of the adenosine base agonist activity at the adenosine A<sub>1</sub>, A<sub>2b</sub> and A<sub>3</sub> receptors, and heteroaromatic bases which have no activity or have an agonist activity at the adenosine A<sub>2a</sub> receptor.

10. The composition of claim 8, wherein the heteroaromatic bases are selected from the group consisting of pyrimidines and purines, which may be substituted by O, halo, NH<sub>2</sub>, SH, SO, SO<sub>2</sub>, SO<sub>3</sub>, COOH and branched and fused primary and secondary amino, alkyl, alkenyl, alkynyl, cycloalkyl, heterocycloalkyl, aryl, heteroaryl, alkoxy, alkenoxy, acyl, cycloacyl, arylacyl, alkynoxy, cycloalkoxy, aroyl, arylthio, arylsulfoxyl,

halocycloalkyl, alkylcycloalkyl, alkenylcycloalkyl, alkynylcycloalkyl, haloaryl, alkylaryl, alkenylaryl, alkynylaryl, arylalkyl, arylalkenyl, alkynyl, arylcycloalkyl, which may be further substituted by O, halo, NH<sub>2</sub>, primary, secondary and tertiary amine, SH, SO, SO<sub>2</sub>, SO<sub>3</sub>, cycloalkyl, heterocycloalkyl, heteroaryl.

11. The composition of claim 10, wherein the pyrimidines and purines are substituted at positions 1, 2, 3, 4, 7 and 8.

12. The composition of claim 11, wherein the pyrimidines and purines are selected from the group consisting of theophylline, caffeine, dyphylline, etophylline, acephylline piperazine, bamifylline, enprofylline and xantine having the chemical formula

wherein R<sup>1</sup> and R<sup>2</sup> are independently H, alkyl, alkenyl or alkynyl and R<sup>3</sup> is H, aryl, dicycloalkyl, dicycloalkenyl, dicycloalkynyl, cycloalkyl, cycloalkenyl, cycloalkynyl, O-cycloalkyl, O-cycloalkenyl, O-cycloalkynyl, NH<sub>2</sub>-alkylamino-ketoxyalkoxy-aryl and mono and dialkylaminoalkyl-N-alkylamino-SO<sub>2</sub> aryl.

13. The composition of claim 12, wherein the universal base is selected from the group consisting of 3-nitropyrrole-2'-deoxynucleoside, 5-nitro-indole, 2-deoxyribosyl-(5-nitroindole), 2-deoxyribofuranosyl-(5-nitroindole), 2'-deoxyinosine, 2'-deoxynebularine, 6H, 8H-3,4-dihydropyrimido [4,5-c] oxazine-7-one or 2-amino-6-methoxyaminopurine.

14. The composition of claim 1, where a methylated cytosine ("C") is substituted for at least one CpG dinucleotide if present in the oligo(s).

15. The composition of claim 1, wherein at least one nucleotide linking residue of the anti-sense oligonucleotide(s) is a residue selected from the group consisting of methylphosphonate, phosphotriester, phosphorothioate, phosphorodithioate, boranophosphate, formacetal, thioformacetal, thioether, carbonate, carbamate, sulfate, sulfonate, sulfamate, sulfonamide, sulfone, sulfite, sulfoxide, sulfide, hydroxylamine, methylene(methylimino), methyleneoxy (methylimino), 2'-O-methyl, phosphoramidate residues and combinations thereof.

16. The agent of claim 15, wherein all nucleotide linking residues are selected from the group consisting of methylphosphonate, phosphotriester, phosphorothioate, phosphorodithioate, boranophosphate, formacetal, thioformacetal, thioether, carbonate, carbamate, sulfate, sulfonate, sulfamate, sulfonamide, sulfone, sulfite, sulfoxide, sulfide, hydroxylamine, methylene(methylimino), methyleneoxy (methylimino), 2'-O-methyl, phosphoramidate residues and combinations thereof.

17. The composition of claim 1, wherein the anti-sense oligonucleotide comprises about 7 to 60 mononucleotides.

18. The composition of claim 1, wherein the anti-sense oligonucleotide comprises fragments 1 to 1670 (SEQ ID NOS: 11 through 1680).

19. The composition of claim 1, wherein the anti-sense oligonucleotide is linked to an agent selected from the group consisting of cell internalized or up-taken agent(s) and cell targeting agents.

20. The composition of claim 19, wherein the cell internalized or up taken agent is selected from the group consisting of transferrin, asialoglycoprotein and streptavidin.

21. The composition of claim 19, wherein the nucleic acid is linked to a vector.

22. The vector of claim 21, which comprises a prokaryotic or eukaryotic vector.

23. The composition of claim 1, wherein the oligo is hybridized to a ribonucleic acid.

24. A cell, comprising the agent of claim 1.

25. The composition of claim 1, further comprising a carrier.

26. The composition of claim 25, wherein the carrier comprises a biologically acceptable carrier.

27. The composition of claim 26, wherein the carrier comprises a pharmaceutically or veterinarily acceptable carrier.

28. The composition of claim 25, wherein the carrier is selected from the group consisting of gaseous, liquid, solid carriers and mixtures thereof.

29. The composition of claim 25, further comprising an agent selected from the group consisting of other therapeutic agents, surfactants, antioxidants, flavoring and coloring agents, fillers, volatile oils, buffering agents, dispersants, RNA inactivating agents, anti-oxidants, flavoring agents, propellants and preservatives.

30. The composition of claim 29, comprising the nucleic acid, a surfactant and a carrier.

31. The composition of claim 29, wherein the surfactant is selected from the group consisting of surfactant protein A, surfactant protein B, surfactant protein C, surfactant protein D and surfactant protein and active fragments thereof, non-dipalmitoyl disaturated phosphatidylcholine, dipalmitylphosphatidylcholine, phosphatidylcholine, phosphatidylglycerol, phosphatidylinositol, phosphatidylethanolamine, phosphatidylserine, phosphatidic acid, ubiquinones, lysophosphatidylethanolamine, lysophosphatidylcholine, palmitoyl-lysophosphatidylcholine, dehydroepiandrosterone, dolichols, sulfatidic acid, glycerol-1-3-phosphate, dihydroxyacetone phosphate, glycerol, glycerol-3-phosphocholine, dihydroxyacetone, palmitate, cytidine diphosphate (CDP) diacylglycerol, CDP choline, choline, choline phosphate, artificial lamellar bodies vehicles for surfactant components, omega-3 fatty acids, polyenic acid, polyenoic acid, lecithin, palmitic acid, non-ionic ethylene and/or propylene oxide block copolymers, polyoxypropylene, polyoxyethylene, poly(vinyl amine) with dextran and/or alkanoyl side chains, Brij 35, Triton X-100, ALEC, Exosurf, Survant and Atovaquone.

32. The composition of claim 31, wherein the RNA inactivating agent comprises an enzyme, preferably a ribozyme.

33. The composition of claim 1, wherein the anti-sense oligonucleotide is present in an amount of about 0.01 to about 99.99 w/w of the composition.

34. The composition of claim 33, wherein the anti-sense oligonucleotide is present in an amount of about 1 to about 40 w/w of the composition.

35. The composition of claim 34, wherein the anti-sense oligonucleotide is present in an amount of about 5 to about 20 w/w of the composition.

36. A formulation, comprising the composition of claim 25, selected from the group consisting of systemic and topical formulations.

37. The formulation of claim 36, selected from the group consisting of oral, intrabuccal, intrapulmonary, rectal, intrauterine, intratumor, intracranial, nasal, intramuscular, subcutaneous, intravascular, intrathecal, inhalable, transdermal, intradermal, intracavitary, implantable, iontophoretic, ocular, vaginal, intraarticular, otical, intravenous, intramuscular, intraglandular, intraorgan, intralymphatic, implantable, slow release and enteric coating formulations.

38. The formulation of claim 37, which is an oral formulation, wherein the carrier is selected from the group consisting of solid and liquid carriers.

39. The oral formulation of claim 38, wherein the liquid carrier is selected from the group consisting of solutions, suspensions, and oil-in-water and water-in-oil emulsions.

40. The oral formulation of claim 38, which is selected from the group consisting of a powder, dragees, tablets, capsules, sprays, aerosols, solutions, suspensions and emulsions.

41. The formulation of claim 36, which is a topical formulation, wherein the carrier is selected from the group consisting of creams, gels, ointments, sprays, aerosols, patches, solutions, suspensions and emulsions.

42. The formulation of claim 36, which is an injectable formulation, wherein the carrier is selected from the group consisting of aqueous and alcoholic solutions and suspensions, oily solutions and suspensions and oil-in-water and water-in-oil emulsions.

43. The formulation of claim 36, which is a rectal formulation in the form of a suppository.

44. The formulation of claim 36, which is a transdermal formulation, wherein the carrier is selected from the group consisting of aqueous and alcoholic solutions, oily solutions and suspensions and oil-in-water and water-in-oil emulsions.

45. The transdermal formulation of claim 36, which is an iontophoretic transdermal formulation, wherein the carrier is selected from the group consisting of aqueous and alcoholic solutions, oily solutions and suspensions and oil-in-water and water-in-oil emulsions, and wherein the formulation further comprises a transdermal transport promoting agent.

46. An implantable capsule or cartridge, comprising the formulation of claim 44.

47. The formulation of claim 36, wherein the carrier is selected from the group consisting of aqueous and alcoholic solutions and suspensions, oily solutions and suspensions and oil-in-water and water-in-oil emulsions.

48. The formulation of claim 36, wherein the carrier comprises a hydrophobic carrier.

49. The formulation of claim 48, wherein the carrier comprises lipid vesicles or particles.

50. The formulation of claim 49, wherein the vesicles comprise liposomes, and the particles comprise microcrystals.

51. The formulation of claim 50, wherein the vesicles comprise liposomes which comprise the anti-sense oligonucleotide.

52. The formulation of claim 49, wherein the vesicles comprise N-(1-[2,3-dioleoyloxy] propyl) - N,N,N-trimethyl-ammonium methylsulfate.

53. The formulation of claim 36, comprising a respirable or inhalable formulation.

54. The respirable or inhalable formulation of claim 53, comprising an aerosol.

55. The formulation of claim 36, in single or multiple unit form.

56. The formulation of claim 36, in bulk.

57. A kit comprising a delivery device; in a separate container, the formulation of claim 36; and instructions for adding a carrier and for use of the formulation.
58. The kit of claim 57, wherein the delivery device comprises a nebulizer which delivers single metered doses of the formulation.
59. The kit of claim 58, wherein the nebulizer comprises an insufflator; and the composition is provided in a pierceable or openable capsule or cartridge.
60. The kit of claim 58, wherein the delivery device comprises a pressurized inhaler; and the composition comprises a suspension, solution or dry formulation of the agent.
61. The kit of claim 57, further comprising, in a separate container, an agent selected from the group consisting of other therapeutic agents, surfactants, anti-oxidants, flavoring agents, fillers, volatile oils, dispersants, antioxidants, propellants, preservatives, buffering agents, RNA inactivating, cell-internalized or up-taken agents and coloring agents.
62. The kit of claim 61, comprising, in separate containers, a nucleic acid, a surfactant and a carrier.
63. The kit of claim 61, wherein the solvent is selected from the group consisting of organic solvents and organic solvents mixed with one or more co-solvents.
64. The kit of claim 57, wherein the composition is provided in a capsule or cartridge.
65. An in vivo method of delivering a nucleic acid comprising an anti-sense oligonucleotide (oligo) to a target polynucleotide associated with a disease(s) or condition(s) afflicting lung airways, comprising administering to a subject the composition of claim 1 comprising an amount of the nucleic acid effective to reach the target polynucleotide.
66. The method of claim 65, wherein the composition is administered into the subject's respiratory system.
67. The method of claim 65, wherein the agent is administered directly into the subject's lung (s).
68. The method of claim 65, wherein the amount of the agent is effective to bind to the nucleic acid.
69. The method of claim 65, wherein the agent is effective to reduce the production or availability, or to increase the degradation, of the target mRNA or to reduce the amount of the target polypeptide present in the lungs.
70. The method of claim 65, wherein the agent is administered as a respirable aerosol.
71. The method of claim 65, wherein the disease or condition is associated with obstruction of the subject's airways.
72. The method of claim 71, wherein the disease or condition is associated with asthma.
73. The method of claim 65, wherein the disease or condition is associated with inflammation.
74. The method of claim 65, wherein the disease or condition is associated with an allergy, and the target is selected from the group consisting of immunoglobulins and antibody receptors, genes and mRNAs encoding them, their genomic and mRNA flanking sequences and exon and intron borders of the gene (s) and mRNA(s).
75. The method of claim 65, wherein the disease or condition is associated with a malignancy or cancer, and the mRNA encodes a target selected from the group consisting of immunoglobulins and antibody receptors, genomic flanking sequences and genes and mRNAs encoding them and oncogenes.
76. The method of claim 65, wherein the composition is administered by a transdermal or systemic route.
77. The method of claim 76, wherein the composition is administered orally, intracavitarily, intranasally, intraanally, intravaginally, intrauterally, intraarticularly, transdermally, intrabucally, intravenously, subcutaneously, intramuscularly, intravascularly, intratumorously, intraglandularly, intraocularly, intracranial, into an organ, intravascularly, intrathecally, intralymphatically, intraotically, by implantation, by inhalation, intradermally, intrapulmonarily, intraotically, by slow release, by sustained release and by a pump.
78. The method of claim 65, wherein the subject is a mammal.
79. The method of claim 78, wherein the mammal is selected from the group consisting of humans and animals.
80. The method of claim 79, wherein the mammal is a human.
81. The method of claim 79, wherein the subject is an animal.
82. The method of claim 65, wherein the anti-sense oligonucleotide is administered in amount of about 0.005 to about 150 mg/kg body weight.
83. The method of claim 82, wherein the anti-sense oligonucleotide is administered in an amount of about 0.01 to about 75 mg/kg body weight.

84. The method of claim 83, wherein the anti-sense ligonucleotide is administered in an amount of about 1 to 50 mg/kg body weight.

85. The method of claim 65, which is a prophylactic method.

86. The method of claim 65, which is a therapeutic method.

87. The method of claim 65, wherein the oligo is obtained by

(a) selecting fragments of a target nucleic acid having at least 4 contiguous nucleic acids selected from the group consisting of G and C;

(b) obtaining a first oligonucleotide 4 to 60 nucleotides long which comprises the selected fragment and has a C and G nucleic acid content of up to and including about 15%; and

(c) obtaining a second oligonucleotide 4 to 60 nucleotides long comprising a sequence which is anti-sense to the selected fragment, the second oligonucleotide having an A base content of up to and including about 15%.

88. The method of claim 61, wherein the oligo consists of up to about 10% A.

89. The method of claim 88, wherein the oligo consists of up to about 5% A.

90. The method of claim 88, wherein the oligo consists of up to about 3% A.

91. The method of claim 92, wherein the oligo is A-free.

92. The method of claim 65, wherein the target is selected from the group consisting of genes and mRNAs encoding polypeptides selected from the group consisting of transcription factors, stimulating and activating factors, interleukins, interleukin receptors, chemokines, chemokine receptors, endogenously produced specific and non-specific enzymes, immunoglobulins, antibody receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide transmitters, adhesion molecules, defensins, growth factors, vasoactive peptides, peptide receptors and binding proteins; and

genes and mRNAs corresponding to oncogenes.

93. The method of claim 65, wherein at least one A is substituted by a universal base selected from the group consisting of heteroaromatic bases which bind to a thymidine base but have antagonist activity and less than about 0.3 of the adenosine base agonist activity at the adenosine A<sub>1</sub>, A<sub>2b</sub> and A<sub>3</sub> receptors, and heteroaromatic bases which have no activity or have an agonist activity at the adenosine A<sub>2a</sub> receptor.

94. The method of claim 93, wherein all As are substituted by universal bases selected from the group consisting of heteroaromatic bases which bind to a thymidine base but have antagonist activity and less than about 0.3 of the adenosine base agonist activity at the adenosine A<sub>1</sub>, A<sub>2b</sub> and A<sub>3</sub> receptors, and heteroaromatic bases which have no activity or have an agonist activity at the adenosine A<sub>2a</sub> receptor.

95. The method of claim 95, wherein the heteroaromatic bases are selected from the group consisting of pyrimidines and purines, which may be substituted by O, halo, NH<sub>2</sub>, SH, SO, SO<sub>2</sub>, SO<sub>3</sub>, COOH and branched and fused primary and secondary amino, alkyl, alkenyl, alkynyl, cycloalkyl, heterocycloalkyl, aryl, heteroaryl, alkoxy, alkenoxy, acyl, cycloacyl, arylacyl, alkynoxy, cycloalkoxy, aroyl, arylthio, arylsulfoxyl, halocycloalkyl, alkylcycloalkyl, alkenylcycloalkyl, alkynylcycloalkyl, haloaryl, alkylaryl, alkenylaryl, alkynylaryl, arylalkyl, arylalkenyl, arylalkynyl, arylcycloalkyl, which may be further substituted by O, halo, NH<sub>2</sub>, primary, secondary and tertiary amine, SH, SO, SO<sub>2</sub>, SO<sub>3</sub>, cycloalkyl, heterocycloalkyl and heteroaryl.

96. The method of claim 95, wherein the pyrimidines and purines are substituted at positions 1, 2, 3, 4, 7 and 8.

97. The method of claim 96, wherein the pyrimidines and purines are selected from the group consisting of theophylline, caffeine, dyphylline, etophylline, acephylline piperazine, bamifylline, enprofylline and xantine having the chemical formula

wherein R<sup>1</sup> and R<sup>2</sup> are independently H, alkyl, alkenyl or alkynyl and R<sup>3</sup> is H, aryl, dicycloalkyl, dicycloalkenyl, dicycloalkynyl, cycloalkyl, cycloalkenyl, cycloalkynyl, O-cycloalkyl, O-cycloalkenyl, O-cycloalkynyl, NH<sub>2</sub>-alkylamino-ketoxyalkoxy-aryl and mono and dialkylaminoalkyl-N-alkylamino-SO<sub>2</sub> aryl.

98. The method of claim 97, wherein the universal base is selected from the group consisting of 3-nitropyrrole-2'-deoxynucleoside, 5-nitro-indole, 2-deoxyribosyl-(5-nitroindole), 2-deoxyribofuranosyl-(5-nitroindole), 2'-deoxyinosine, 2'-deoxynebularine, 6H, 8H-3,4-dihydropyrimido [4,5-c] oxazine-7-one or 2-amino-6-methoxaminopurine.

99. The method of claim 65, further comprising methylating at least one cytosine (mC) if a CpG dinucleotide is present in the oligo(s).

100. The method of claim 65, further comprising substituting at least one nucleotide linking residue of the anti-sense oligonucleotide(s) with a residue selected from the group consisting of methylphosphonate, phosphotriester, phosphorothioate, phosphorodithioate, boranophosphate, formacetal, thioformacetal, thioether, carbonate, carbamate, sulfate, sulfonate, sulfamate, sulfonamide, sulfone, sulfite, sulfoxide, sulfide, hydroxylamine, methylene(methylimino), methyleneoxy (methylimino), 2'-O-methyl, phosphoramidate residues, and combinations thereof.

101. The method of claim 100, wherein all nucleotide linking residues of the oligo are substituted.

102. The method of claim 65, further comprising linking the anti-sense oligonucleotide to an agent selected from the group consisting of cell internalized and up-taken agent(s) and cell targeting agents.

103. The method of claim 102, wherein the cell internalized or up taken agent is selected from the group consisting of transferrin, asialoglycoprotein, and streptavidin.

104. The method of claim 102, wherein the cell targeting agent is a vector.

105. The method of claim 104, wherein the vector to which the agent is operatively linked is a prokaryotic or eukaryotic vector.

106. A method of identifying segments in a target polynucleotide suitable for constructing oligonucleotides which are anti-sense to the target polynucleotide and have an adenosine (A) content of up to and including about 15% of all nucleotides, comprising

(a) selecting fragments of a target polynucleotide acid having at least 4 contiguous nucleic acids selected from the group consisting of G and C; and

(a) obtaining a first oligonucleotide 4 to 60 nucleotides long which comprises the selected fragment and has a C and G content of up to and including about 15%.

107. A method of obtaining oligonucleotides which are anti-sense to a target polynucleotide and have an adenosine content of 0 to up to and including about 15%, comprising conducting the method of claim 106; wherein the first oligonucleotide comprises a sequence which is anti-sense to the selected fragment and has an A content of up to and including about 15%.

108. The method of claim 107, further comprising, when the anti-sense fragment comprises at least one A, substituting at least one A with a universal base selected from the group consisting of

heteroaromatic bases which bind to thymidine (T) but have less than about 0.3 of A's adenosine A<sub>1</sub>, A<sub>2b</sub> and A<sub>3</sub> receptor agonist activity; and

heteroaromatic bases which have no activity or have adenosine A<sub>2a</sub> receptor agonist activity.

109. The method of claim 108, wherein the heteroaromatic bases are selected from the group consisting of pyrimidines and purines, which may be substituted by O, halo, NH<sub>2</sub>, SH, SO, SO<sub>2</sub>, SO<sub>3</sub>, COOH and branched and fused primary and secondary amino, alkyl, alkenyl, alkynyl, cycloalkyl, heterocycloalkyl, aryl, heteroaryl, alkoxy, alkenoxy, acyl, cycloacyl, arylacyl, alkynoxy, cycloalkoxy, aroyl, arylthio, arylsulfoxyl, halocycloalkyl, alkylcycloalkyl, alkenylcycloalkyl, alkynylcycloalkyl, haloaryl, alkylaryl, alkenylaryl, alkynylaryl, arylalkyl, arylalkenyl, arylalkynyl, arylcycloalkyl, which may be further substituted by O, halo, NH<sub>2</sub>, primary, secondary and tertiary amine, SH, SO, SO<sub>2</sub>, SO<sub>3</sub>, cycloalkyl, heterocycloalkyl and heteroaryl.

110. The method of claim 109, wherein the pyrimidines and purines are substituted at positions 1, 2, 3, 4, 7 and 8.

111. The method of claim 109, wherein the pyrimidines and purines are selected from the group consisting of theophylline, caffeine, dyphylline, etophylline, acephylline piperazine, bamifylline, enprofylline and xantine having the chemical formula

wherein R<sup>1</sup> and R<sup>2</sup> are independently H, alkyl, alkenyl or alkynyl and R<sup>3</sup> is H, aryl, dicycloalkyl, dicycloalkenyl, dicycloalkynyl, cycloalkyl, cycloalkenyl, cycloalkynyl, O-cycloalkyl, O-cycloalkenyl, O-cycloalkynyl, NH<sub>2</sub>-alkylamino-ketoxyalkoxy-aryl and mono and dialkylaminoalkyl-N-alkylamino-SO<sub>2</sub> aryl.

112. The method of claim 108, wherein the universal base is selected from the group consisting of 3-nitropyrrole-2'-deoxynucleoside, 5-nitro-indole, 2-deoxyribosyl-(5-nitroindole), 2-deoxyribofuranosyl-(5-nitroindole), 2'-deoxyinosine, 2'-deoxynebularine, 6H, 8H-3,4-dihydropyrimido [4,5-c] oxazine-7-one or 2-amino-6-methoxyaminopurine.

113. A method of treating a disease or condition associated with a target selected from the group consisting of proteins, gene (s) and their corresponding mRNA(s) encoding the proteins, the genes and mRNA flanking regions and their intron and exon borders, associated with a disease or condition afflicting lung airways, comprising administering to a subject afflicted with the disease or condition the composition of claim 1 comprising an anti-bronchoconstriction, anti-allergic and/or anti-inflammatory effective amount of the nucleic acid.

114. The method of claim 113, wherein the amount of nucleic acid administered is effective to reduce the production or availability, or to increase the degradation, of the mRNA, or to reduce the amount of the polypeptide present in the lungs.

115. The method of claim 113, wherein the nucleic acid is administered directly to the lung (s) of the subject.

116. The method of claim 113, wherein the nucleic acid is administered as a respirable aerosol.

117. The method of claim 113, wherein the disease or condition is a disease or condition afflicting the lung (s).

118. The method of claim 117, wherein the disease or condition is associated with obstruction of the subject's airways.

119. The method of claim 117, wherein the disease or condition is associated with asthma.

120. The method of claim 117, wherein the disease or condition is associated with inflammation.

121. The method of claim 113, wherein the disease or condition is associated with allergy (ies), and the target is selected from the group consisting of immunoglobulins and antibody receptors, gene(s) and corresponding mRNA(s) encoding them, the genes and mRNA flanking regions and intron and exon borders.

122. The method of claim 113, wherein the disease or condition is associated with a malignancy or cancer; and the target is selected from the group consisting of immunoglobulins and antibody receptors, gene(s) and mRNA(s) encoding them, gene(s) and mRNA(s) associated with oncogenes, genomic and mRNA flanking regions and exon and intron borders.

123. The method of claim 113, wherein the composition is administered by a topical or systemic route.

124. The method of claim 123, wherein the composition is administered orally, intracavitarily, intranasally, intraanally, intravaginally, intrauterally, intraarticularly, intraotically, intralymphatically, transdermally, intrabucally, intravenously, subcutaneously, intramuscularly, intratumorously, intraglandularly, intraocularly, intracranial, into an organ, intravascularly, intrathecally, by implantation, by inhalation, intradermally, intrapulmonarily, into the ear, by slow release, by sustained release and by a pump.

125. The method of claim 124, wherein the subject is a mammal.

126. The method of claim 125, wherein the mammals are selected from the group consisting of humans and animals.

127. The method of claim 113, wherein the anti-sense oligonucleotide is administered in amount of about 0.005 to about 150 mg/kg body weight.

128. The method of claim 127, wherein the anti-sense oligonucleotide is administered in an amount of about 0.01 to about 75 mg/kg body weight.

129. The method of claim 130, wherein the anti-sense oligonucleotide is administered in an amount of about 1 to about 50 mg/kg body weight.

130. The method of claim 113, which is a prophylactic method.

131. The method of claim 113, which is a therapeutic method.

132. A method of producing anti-sense oligonucleotide(s) (oligos) consisting of up to and including about 15% adenosine (A), comprising

selecting a target from the group consisting of polypeptides associated with a disease(s) and/or condition(s) afflicting lung airways, genes and RNAs encoding them, the genomic and mRNA flanking regions and the gene(s) and mRNA(s) intron and exon borders;

obtaining the sequence of a mRNA(s) selected from the group consisting of mRNAs corresponding to the target gene(s) and mRNAs encoding the target polypeptide(s), genomic and mRNA flanking regions and the genes and mRNAs intron and exon borders;

selecting at least one segment of the mRNA(s);

synthesizing one or more oligo anti-sense to the selected mRNA segment(s); and

substituting, if necessary, a universal base(s) for one or more A(s) to reduce the content of A present in the oligo to up to about 15% of all nucleotides.

133. The method of claim 132, wherein the universal base is selected from the group consisting of heteroaromatic bases which bind to a thymidine base but have antagonist activity and less than about 0.3 of the adenosine base agonist activity at the adenosine A<sub>1</sub>, A<sub>2b</sub> and A<sub>3</sub> receptors, and heteroaromatic bases which have no activity or have an agonist activity at the adenosine A<sub>2a</sub> receptor.

134. The method of claim 132, wherein all As are substituted with universal bases selected from the group consisting of heteroaromatic bases which bind to a thymidine base but have antagonist activity and less than

about 0.3 of the adenosine agonist activity at the adenosine A<sub>1</sub>, A<sub>2b</sub> and A<sub>3</sub> receptors, and heteroaromatic bases which have no activity or have an agonist activity at the adenosine A<sub>2b</sub> receptor.

135. The method of claim 133, wherein the heteroaromatic bases are selected from the group consisting of pyrimidines and purines, which may be substituted by O, halo, NH<sub>2</sub>, SH, SO, SO<sub>2</sub>, SO<sub>3</sub>, COOH and branched and fused primary and secondary amino, alkyl, alkenyl, alkynyl, cycloalkyl, heterocycloalkyl, aryl, heteroaryl, alkoxy, alkenoxy, acyl, cycloacyl, arylacyl, alkynoxy, cycloalkoxy, aroyl, arylthio, arylsulfoxyl, halocycloalkyl, alkylcycloalkyl, alkenylcycloalkyl, alkynylcycloalkyl, haloaryl, alkylaryl, alkenylaryl, alkynylaryl, arylalkyl, arylalkenyl, arylalkynyl, arylcycloalkyl, which may be further substituted by O, halo, NH<sub>2</sub>, primary, secondary and tertiary amine, SH, SO, SO<sub>2</sub>, SO<sub>3</sub>, cycloalkyl, heterocycloalkyl and heteroaryl.

136. The method of claim 135, wherein the pyrimidines and purines are substituted at positions 1, 2, 3, 4, 7 and 8.

137. The method of claim 135, wherein the pyrimidines and purines are selected from the group consisting of theophylline, caffeine, dyphylline, etophylline, acephylline piperazine, bamifylline, enprofylline and xantine having the chemical formula

wherein R<sup>1</sup> and R<sup>2</sup> are independently H, alkyl, alkenyl or alkynyl and R<sup>3</sup> is H, aryl, dicycloalkyl, dicycloalkenyl, dicycloalkynyl, cycloalkyl, cycloalkenyl, cycloalkynyl, O-cycloalkyl, O-cycloalkenyl, O-cycloalkynyl, NH<sub>2</sub>-alkylamino-ketoxyalkyloxy-aryl and mono and dialkylaminoalkyl-N-alkylamino-SO<sub>2</sub> aryl.

138. The method of claim 135, wherein the universal base is selected from the group consisting of 3-nitropyrrole-2'-deoxynucleoside, 5-nitro-indole, 2-deoxyribosyl-(5-nitroindole), 2-deoxyribofuranosyl-(5-nitroindole), 2'-deoxyinosine, 2'-deoxynebularine, 6H, 8H-3,4-dihydropyrimido [4,5-c] oxazine-7-one or 2-amino-6-methoxyaminopurine.

139. The method of claim 132, wherein the proportion of A in the oligo is reduced to up to about 10%.

140. The method of claim 139, wherein the proportion of A in the oligo is reduced to up to about 5%.

141. The method of claim 140, wherein the proportion of A in the oligo is reduced to up to about 3%.

142. The method of claim 141, wherein the proportion of A in the oligo is reduced to about 0.

143. The method of claim 139, wherein the selected segment contains less than about 15% T.

144. The method of claim 132, further comprising substituting a methylated cytosine for cytosine in at least one CpG dinucleotide present in the anti-sense oligo(s).

145. The method of claim 132, wherein the anti-sense oligo(s) are about 7 to about 60 nucleotides long.

146. The method of claim 132, wherein the target is selected from the group consisting of transcription factors, stimulating and activating factors, interleukins, interleukin receptors, chemokines, chemokine receptors, endogenously produced specific and non-specific enzymes, immunoglobulins, antibody receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system peptide transmitters, adhesion molecules, selectins, defensins, growth factors, vasoactive peptides, vasoactive peptide receptors, and binding proteins and oncogenes.

147. The method of claim 146, wherein the target genes are selected from the group consisting of oncogenes.

148. An anti-sense oligonucleotide produced by the method of claim 132.
